GDCh-Advisory Committee on Existing Chemicals of Environmental Relevance (BUA)

Chairman:

Prof. Dr. E. Bayer, Institut für Organische Chemie der Universität Tübingen

Members:

Dr. G. Alfke, Mineralölwirtschaftsverband e. V., Hamburg
Prof. Dr. K. Ballschmiter, Abteilung Analytische Chemie und Umweltchemie der Universität Ulm
Dr. R. Bias, BASF AG, Emissionsüberwachung und Ökologie, Ludwigshafen a. Rh.
Prof. Dr. O. Fränzle, Geographisches Institut der Universität Kiel
Prof. Dr. H.-P. Gelbke, BASF AG, Toxikologie, Ludwigshafen a. Rh.
Prof. Dr. H. Greim, GSF — Institut für Toxikologie, Neuherberg (Vice Chairman)
Dir. und Prof. Dr. J. Hahn, Institut für Wasser-, Boden- und Lufthygiene des Umweltbundesamtes, Berlin
Dr. H. Heÿn, HOECHST AG, Ressortgruppe Umwelt, Frankfurt am Main
Dr. H. Jungen, Deutsche Wissenschaftliche Gesellschaft für Erdöl, Erdgas und Kohle e. V., Hamburg
Dir. und Prof. Dr. D. Kayser, Bundesinstitut für gesundheitlichen Verbraucherschutz und Veterinärmedizin, Berlin
Dr. W. Mayr, DEGUSSA AG, Abteilung Umweltschutz/Industrielle Toxikologie, Hanau
Dr. W. Mühlhölzl, Bayerische Landesanstalt für Wasserforschung, München
Prof. Dr. P. Müller, Institut für Biogeographie, Universität des Saarlandes, Saarbrücken
Prof. Dr. R. Nagel, Institut für Hydrobiologie der Technischen Universität Dresden
Dir. und Prof. Dr. H. Neidhard, Umweltbundesamt, Berlin
MinRat Prof. Dr. U. Schlottmann, Bundesministerium für Umwelt, Naturschutz und Reaktorsicherheit, Bonn
Dr. B. Stock, BAYER AG, Umweltschutz/Produktsicherheit, Leverkusen
Präsident Dr. A. Troge, Umweltbundesamt, Berlin

Collaborators and Guests:

Dr. K. H. Adlfinger, Initiative Umweltrelevante Altstoffe, Frankfurt am Main
Priv.-Doz. Dr. J. Ahlers, Fachgebiet IV 1.2 des Umweltbundesamtes, Berlin
Dr. M. Andreae, BASF AG, Ludwigshafen a. Rh.
Dr. A. Bartsch, GSF - Institut für Toxikologie, Neuherberg
Dr. A. V. Battersby, EBRC Consulting GmbH, Hannover
Frau Dr. A. Boehncke, Fraunhofer-Institut für Toxikologie und Aerosolforschung, Hannover
Dr. W. Ernst, BG Chemie, Heidelberg
Dr. S. Ettel, Institut für Organische Chemie der Universität Tübingen
Dr. S. Forderkunz, GSF - Institut für Toxikologie, Neuherberg
Prof. Dr. F. H. Frimmel, DVGW-Forschungsstelle am Engler-Bunte-Institut der Universität Karlsruhe
Dr. R. F. Hertel, Fachgruppe 821 des Bundesinstituts für gesundheitlichen Verbraucherschutz und Veterinärmedizin, Berlin
Frau Dipl.-Ing. S. Kniestedt, BASF AG, Ludwigshafen a. Rh.
Dr. H.-J. Klimisch, BASF AG, Toxikologie, Ludwigshafen a. Rh.
Frau Dr. U. Koch, BAYER AG, Toxikologie, Wuppertal
Dr. J. Koppenhöfer, Institut für Organische Chemie der Universität Tübingen
Dr. R. Müller, DOW Deutschland Inc., Stade
Frau Dr. H. Sterzl-Eckert, GSF - Institut für Toxikologie, Neuherberg
Dr. D. Vogel, Institut für Organische Chemie der Universität Tübingen
Frau Dipl.-Biol. L. Weis, Institut für Organische Chemie der Universität Tübingen
Dr. A. Wibbertmann, Fraunhofer-Institut für Toxikologie und Aerosolforschung, Hannover
Frau Dr. K. Widmann, Institut für Organische Chemie der Universität Tübingen
Frau Dr. K. Ziegler-Skylakakis, GSF - Institut für Toxikologie, Neuherberg

Foreword

The German Chemicals Act (Chemikaliengesetz — ChemG) of 1980 stipulates that certain existing chemicals must be reported to the competent authority, if they exhibit properties which indicate that they may be hazardous, either alone or in combination with other substances.

In the summer of 1982, an Advisory Committee on Existing Chemicals of Environmental Relevance (BUA) was set up by the German Chemical Society (Gesellschaft Deutscher Chemiker - GDCh). It brings together representatives from the scientific community, the chemical industry and the governmental authorities. This Advisory Committee is responsible for elaborating appropriate solutions for substances of relevance for health and the environment on the basis of voluntary measures. It selects and examines existing chemicals from the aforementioned angles. The testing and evaluation are based on scientific criteria alone.

It was, therefore, necessary to develop priority setting procedures. In a first phase reports were only prepared for priority chemicals. Within the framework of a first priority setting procedure, chemicals were compiled from several priority lists and 135 chemicals were selected for detailed reports.

In a second priority setting procedure the survey of the German Chemical Industry Association (VCI) on all substances with a production volume of more than 10 tons per year was used as a starting list. Since this survey covered 4,600 chemicals, BUA decided to process the corresponding list in several stages. The first stage included approx. 1,050 substances with a production volume of more than 1,000 tons per year. This priority setting procedure, which utilized data sets provided by the industry and must appraise exposure data and the most important biological effect data, is the subject of a separate publication entitled "Existing Chemicals of Environmental Relevance III".

Detailed reports are drawn up on chemicals suspected of having a hazard potential and abridged reports on those presenting only a minor hazard potential, according to the current state of knowledge.

The detailed BUA reports take in both the published literature and data from industry. If data for the evaluation of the chemicals are not available, additional studies are recommended and the results are published as update to the reports. The reports serve as a basis for the instigation of administrative measures, when there are indications of risks to health or the environment.

Tübingen, May 1993

Ernst Bayer
Chairman of the Advisory Committee
on Existing Chemicals
of Environmental Relevance

p-Hydroxybenzoic acid

BUA Report 164
(December 1993)

edited by the GDCh-Advisory

Umweltrelevante Altstoffe (BUA)

Contents

p-Hydroxybenzoic Acid

1.	Chemical Identity	1
2.	Production, Application, Introduction into the Environment	1
3.	Environmental Occurrence	3
3.1	Atmosphere	3
3.2	Hydrosphere	4
3.3	Biosphere	5
3.4	Geosphere	5
4.	Environmental Behavior	6
5.	Ecotoxicity	8
6.	Toxicity to Warm-Blooded Animals	9
7.	Summary	11
8.	References	19
Appendix:	Base Data Set of Bayer AG:	
	p-Hydroxybenzoic Acid	1-34

Hexabromocyclododecane

BUA Report 165
(August 1995)

edited by the GDCh-Advisory

of Environmental Relevance

Beratergremium für
Umweltrelevante Altstoffe (BUA)

Contents

Hexabromocyclododecane

1	Chemical identity	1
2	Manufacture, use, discharge into the environment	2
3	Occurrence in the environment	4
4	Behaviour in the environment	5
5	Ecotoxicology	8
6	Toxicity to mammals and experience in man	10
7	Substance-specific legal regulations	13
8	Summary and conclusions	13
9	Recommendations	15
10	Literature	16
Annex:	EUCLID Base Data Set of BASF AG	
	Hexabromocyclododecane	1-29

Propylene glycol

BUA Report 166
(August 1995)

edited by the GDCh-Advisory
